

Delivering Data Layers the Smart Way with NDS.Live

an NDS Association webinar
March 25, 2021

NDS.Live webinars

Watch online:

1. The advantages of using NDS.Live for Intelligent Speed Assistance (ISA)

- Recording of the webinar held on February 4, 2021
→ <https://nds-association.org/nds-live-isa-webinar/>

2. What is NDS.Live?

- Recording of the webinar held on February 25, 2021
→ <https://nds-association.org/nds-live-webinar-2-recap/>

3. Reducing Data Consumption with NDS.Live

- Recording of the webinar held on February 25, 2021
→ <https://nds-association.org/nds-live-webinar-3-recap/>

Today:

4. Delivering Data Layers the Smart Way with NDS.Live

Recording on YouTube soon. Link to video will be posted on LinkedIn and the NDS Association website.

Your hosts and speakers today

Fabian Klebert

Technical Coordinator for the NDS
Association
&
CEO at Klebert Engineering

Philip Hubertus

Senior Product Manager
Automotive Products
HERE Technologies

Agenda

- NDS & Market Needs (15 mins)
 - Platforms and Scale
 - Features relying on Map Data
 - Connectivity and Data Freshness
- NDS.Live (20 mins)
 - From basics to design principles to Smart Layers
 - Modularity and how it enables scale from basic assistance features, to navigation, to fully automated driving
- Live Q&A (20 mins) – be ready to be on camera 😊

**NDS is THE worldwide
standard for map data
in automotive eco-systems**

NDS is THE worldwide

worldwide coverage and global adoption

standard for map data

one specification with enough flexibility
for a customized user experience

data model (structure & semantics),
storage format, interfaces, protocols

in automotive eco-systems

in-vehicle applications, companion applications, cloud applications, vehicle related services,
supporting navigation, driver assistance and autonomous driving

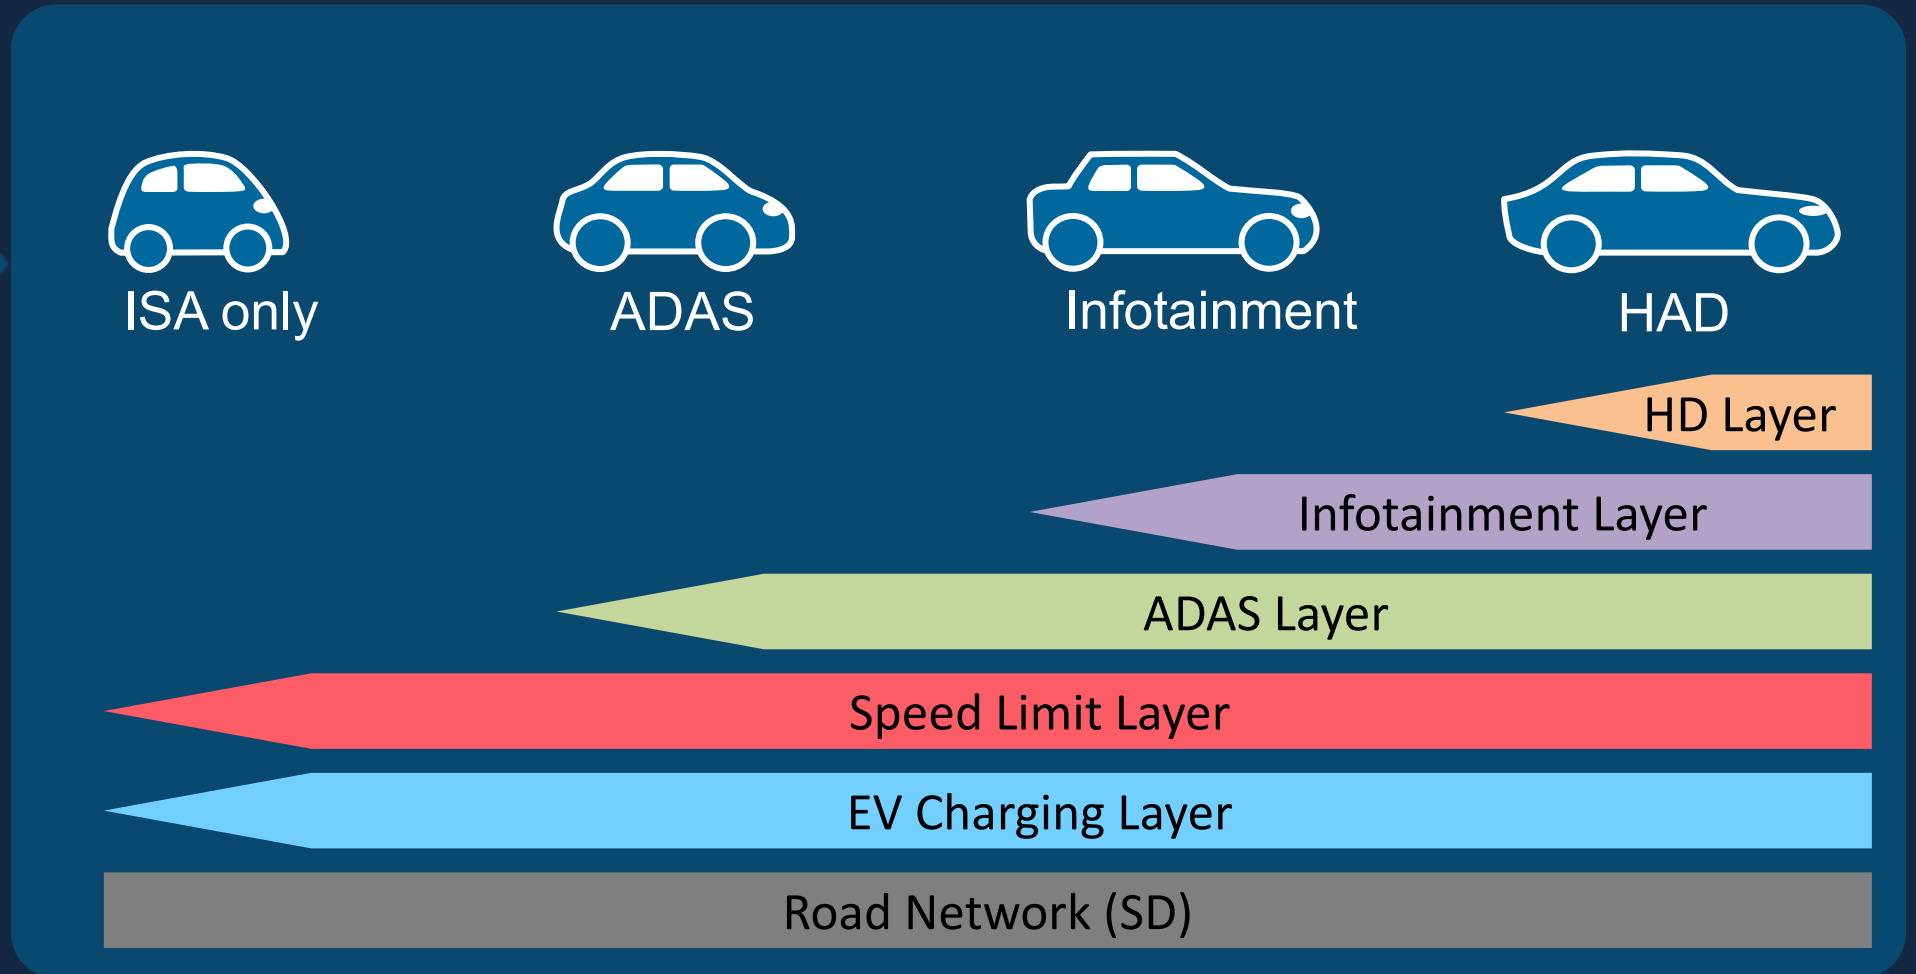

NDS Association members

The NDS format specification is defined by the members of the NDS association.
This includes world leading OEMs, system vendors, solution providers, and navigation data providers.

Navigation Data Standard

NDS.Live - SmartLayer

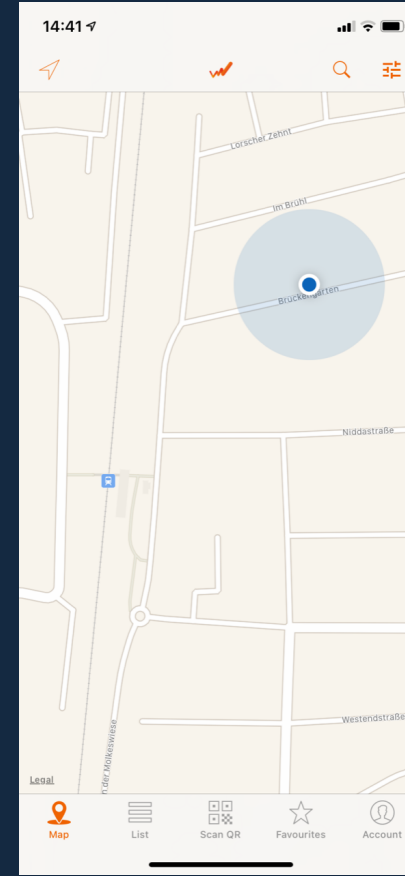

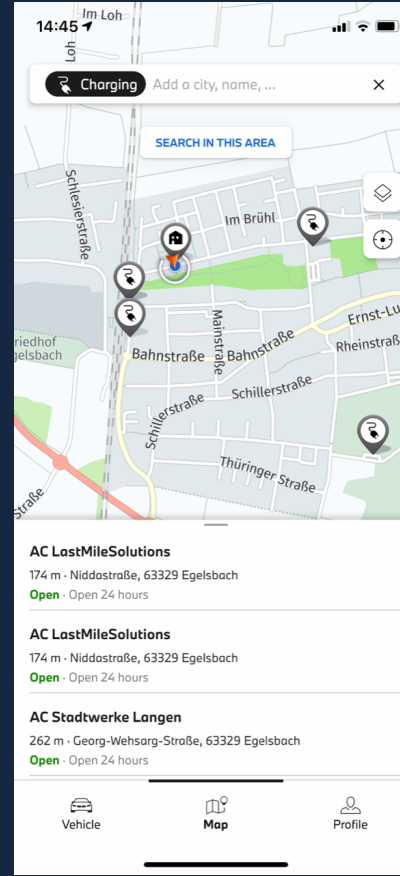

Data Needs: Uses Cases and Data Freshness

		Freshness 		
Use Cases / Shelf-life		Static Data that stays valid for long periods of time, with typically only small fractions changing over time. This is what classical versioned map data is about.	Dynamic Changing data with limited temporal validity (days/hours). Age checks must be used to determine if the dynamic information can be applied.	Live Transient data with momentary validity. For example, such data may be a vehicle's state/e-Horizon, a route, or a search result. Applications either use it right away or discard it.
 Universal Data that is generally relevant for a broad set of use cases or as a general reference for all other data		Roads or display data	Construction sites	Traffic light phase Variable Message Signs
	 Collective Data is relevant to a specific group of use cases. Examples for this are ISA, ADAS, navigation as well as vehicle types (cars vs. trucks), engine types (electric vs. fuel)	POI (OEM brand specific)	EV charging station avail.	Dynamic speed limits, Parking spot availability (automated valet parking)
	 Individual For specific use cases, data could be generated/bundled based on individual requests.	Indoor parking map	POI (sport event)	MPP, routing, search

EV Charging Example

*„NDS.Live is not a database,
it is a distributed map data system“*

NDS.Live is ready now!

*NDS.Live Joint Development Team
is working on first SD & HD map
ADAS services and clients!*

NDS.Live - Design Considerations & Data Consumption

NDS.Live Design Considerations

- **Multiple Data Vendors and Sources**
Where is data stored (cloud, edge, vehicle) and who offers it?
- **Streaming and Dynamic Data**
As an addition to embedded map data, support continuous updates in high frequency (incl. real-time)
- **Embedded & Distributed Applications**
Provide a unified way to access online services that offers basic functionality, like search or routing
- **Modular Design**
Parts of the standard can be developed and used independently
- **Prepared for ADAS & Autonomous Driving**
Provide highly detailed data and keep functional safety in mind

NDS.Live Data Consumption

- **NDS.Live data is either organized as ...**
 - tiles
 - paths
 - objects
- **NDS.Live data services allow for**
 - downloading and storing of data
 - streaming and caching of data
 - requesting tiles, paths, or objects for immediate use
- **NDS.Live data services can be accessed by**
 - OEM or system vendor cloud-based clients (B2B) as a proxy for distribution to vehicles
 - Directly by connected vehicle clients (B2C)

Recap from previous webinars

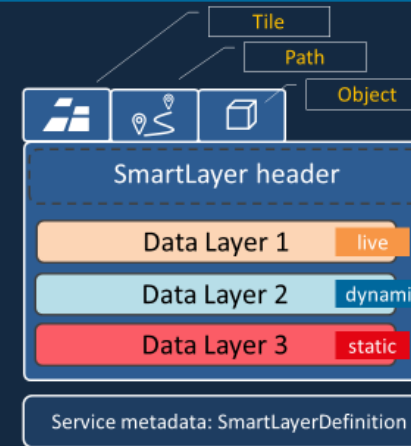

Data layers

... can be **freely configured**

... come as **tiles, paths, objects**

SmartLayers get served over
web or in car

NDS.Live Smart Layer – Summary

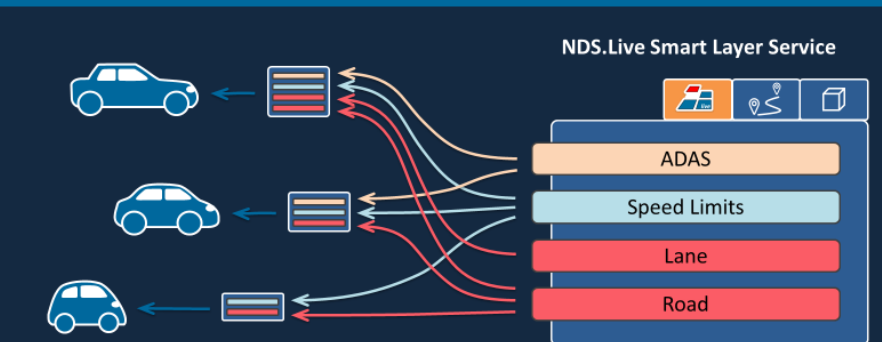

SmartLayer container

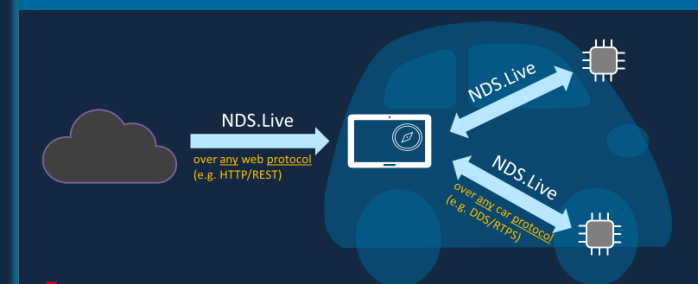

- ... all have the **same layout**
- ... differ only in **geospatial coverage**
- ... contain layers from different specification **modules**
- ... serve all **data lifetimes**

One configuration per service

NDS.Live SmartLayer – Configuration flexibility

NDS.Live – Not tied to any transport protocol

What data layers are available already?

Road topology

Road geometry

Lane topology

Lane geometry

Road surface geometry

Road ADAS

Road rules

Road characteristics

Road localization

Lane ADAS

Lane rules

Lane characteristics
